

AS 9100 Rev D 2016 Quality Standard from AS 9100 Rev C for Aviation, Space and Defence Industries

AS 9100 is a product of the International Aerospace Quality Group (**IAQG**), composed of three primary regional sector groups: the Americans Aerospace Quality Group (**AAQG**) the European Aerospace Quality Group (**EAQG**), and the Asia Pacific Aerospace Quality Group (**APAQG**). To assure customer satisfaction, aviation, space, and defence organizations must provide, and continually improve, safe and reliable products and services that meet or exceed customer and applicable statutory and regulatory requirements. The globalization of the industry and the resulting diversity of regional and national requirements and expectations have complicated this objective. Organizations have the challenge of purchasing products and services from external providers throughout the world and at all levels of the supply chain. External providers have the challenge of delivering products and services to multiple customers having varying quality requirements and expectations.

Industry has established the International Aerospace Quality Group (IAQG), with representatives from aviation, space, and defence companies in the Americas, Asia/Pacific, and Europe, to implement initiatives that make significant improvements in quality and reductions in cost throughout the value stream. This standard has been prepared by the IAQG. This standard has been revised to incorporate the new clause structure and content of ISO 9001:2015. In addition, industry requirements, definitions, and notes have been revised in response to both ISO 9001 revisions and stakeholder needs.

The scope of the Training would be to give a first-hand explanation on implementation of the new standards including highlighting the new requirements, Structure and also the changes from the AS9100 Rev C.

LEARNING OUT COME

- ⇒ Understanding ISO 9001 QMS w.r.t AS9100
