

Comprehensive Workshop On ISO 14001:2015 Environmental Management Systems

The International Standards developed by ISO (International organization for standardization) are of high value for developing countries. They offer indeed practical solutions to a variety of issues related to international trade and technology transfer because they represent a reservoir of technological know-how and of product, performance, quality, safety and environmental specifications.

Standards are a vehicle for the sharing of knowledge, technology and good practices; an essential component of the world wide industrial and postindustrial scenario, supporting economic, social needs and more equitable opportunities – in other words, sustainable development.

ISO 14001 is an internationally accepted standard that outlines how to put an effective environmental management system in place. It is designed to help businesses remain commercially successful without overlooking environmental responsibilities.

It can also help you to grow while reducing the environmental impact of this growth. An ISO 14001 system provides the framework to allow you to meet increasingly high customer expectations of corporate responsibility as well as legal or regulatory requirements.
