

Comprehensive One Day Workshop On TS 16949 AWARENESS

The ISO/TS16949 is an ISO technical specification aiming to the development of a quality management system that provides for continual improvement, emphasizing defect prevention and the reduction of variation and waste in the supply chain. It was developed for the automotive industry.

This Technical Specification, in conjunction with ISO 9001:2008, defines the quality management system requirements for the design and development, production and, when relevant, installation and service of automotive related products. This Technical Specification is applicable to sites of the organization where customer-specified parts, for production and/or service, are manufactured. Supporting functions, whether on-site or remote (such as design centres, corporate headquarters and

distribution centres), form part of the site audit as they support the site, but cannot obtain stand-alone certification to this Technical Specification

LEARNING OUT COME

Upon completion of this training, participants will be exposed to the documentation, auditing techniques and will learn about

- ⇒ Purpose of Quality Management Systems – Automotive Production
- ⇒ Principles of Quality Management Systems – Automotive Production
